Cladari Business Plan

Cladari Business Plan

Prepared by: Dave Chinnici

Version: Draft 1.0

Date: April 20, 2025

Executive Summary

Cladari is a next-generation biological intelligence and provenance platform. It begins with exotic and rare plant lineages-particularly aroids-and expands into a broader infrastructure for verifying, recording, and preserving the authenticity of living things. Leveraging voice-enabled AI ("Numina"), on-premise large language models (LLMs), DNA lineage analysis, and secure provenance systems, Cladari aims to bring integrity and traceability to a fragmented biological and ecological ecosystem.
